

Conflict Materials

Dear Ladies and Gentlemen

Recently we have received an increasing number of enquiries and letters on the subject of product conformity (RoHS, REACH, conflict minerals) concerning the requirement arising from the US Dodd Frank Wall Street Reform and the Conflict Material Act to prove that the so-called **3TG** minerals tin, tantalum, tungsten and gold are not contained in our material. Tin is the only one of the listed metals that could be contained in our products as a possible alloying component.

In this context, we have confronted our most important suppliers and manufacturers for the product groups in question with the requirements and can confirm that, as a matter of principle, none of the 3TG metals originate from any of the conflict countries on the list, such as the Democratic Republic of Congo or neighbouring states. We would like to point out that semi-finished product manufacturers also use metals from recycled or scrap sources.

Although there is no evidence of incorrect information on the part of our suppliers, we do not accept liability for the accuracy of the information provided.

Due to the large number of enquiries, we are unable to respond to further requests, such as the completion of questionnaires - we thank you for your understanding.

Please do not hesitate to contact us for further information.
